[2148 rows x 19 columns]

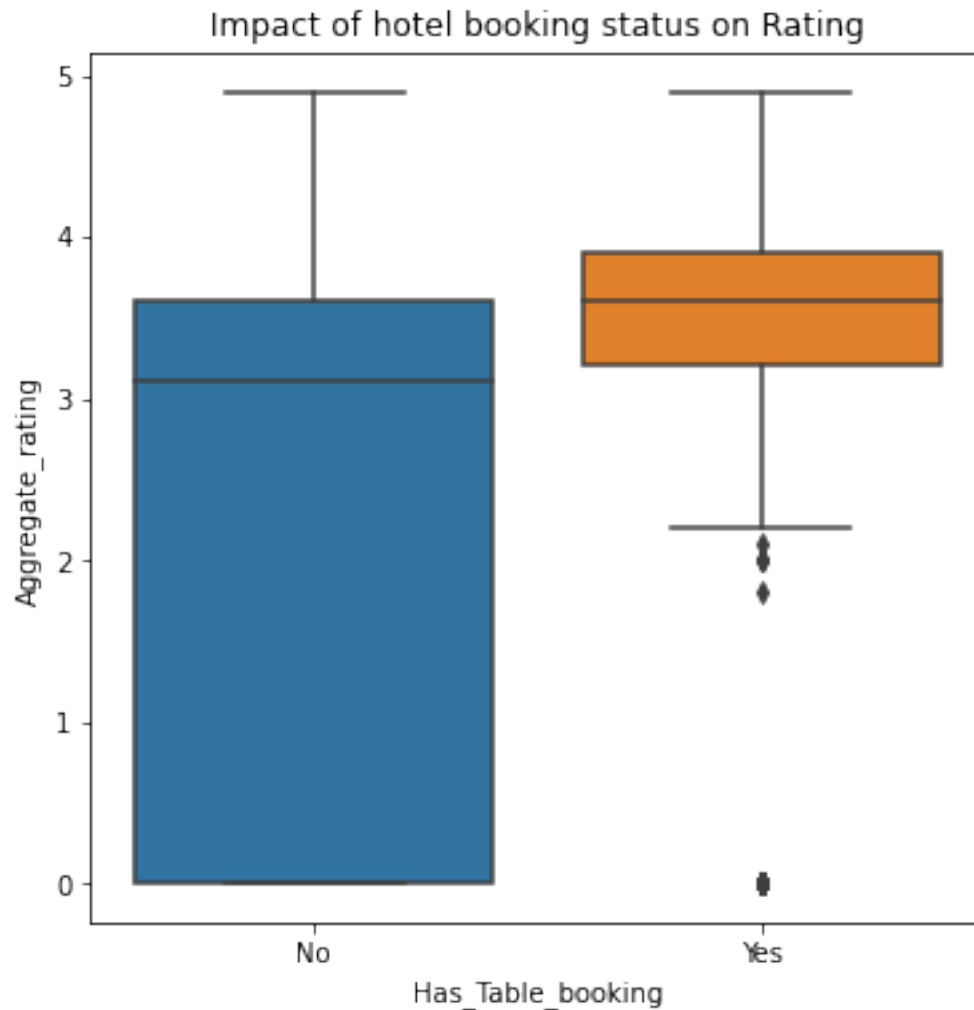

```
[20]: df.hist(column='Aggregate_rating', grid=False,bins=10,figsize=(10,5),
           color='y')
plt.show()
```

[ ]: Most of the data distributed besides the average rating, but also above 2000.   
→ restaurants have 0 rating on which organization should take decision to   
→ improve ratings

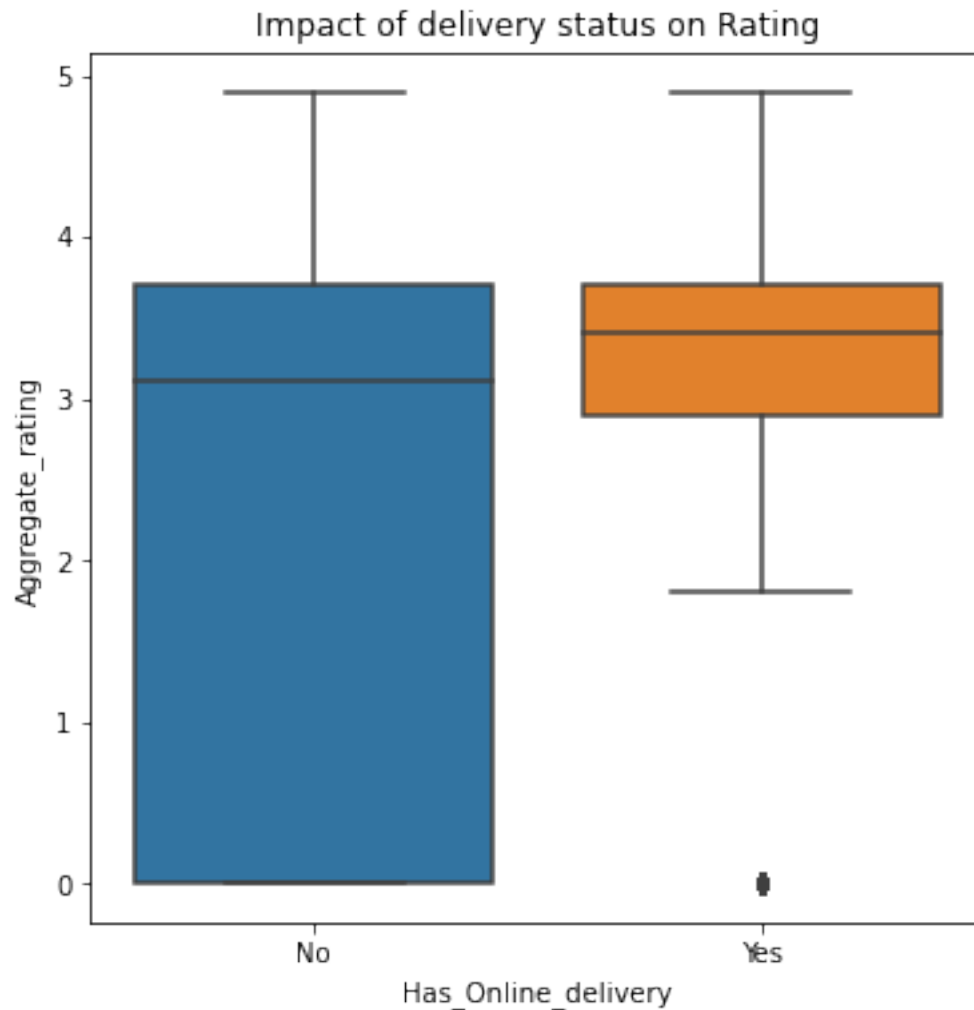

[ ]: Now explaining the factors who's affects on ratings  
Visualising Book Table vs Rating

```
[22]: plt.figure(figsize=(6,6))
sns.boxplot(x="Has_Table_booking", y="Aggregate_rating", data=df)
plt.title("Impact of hotel booking status on Rating")
plt.show()
```

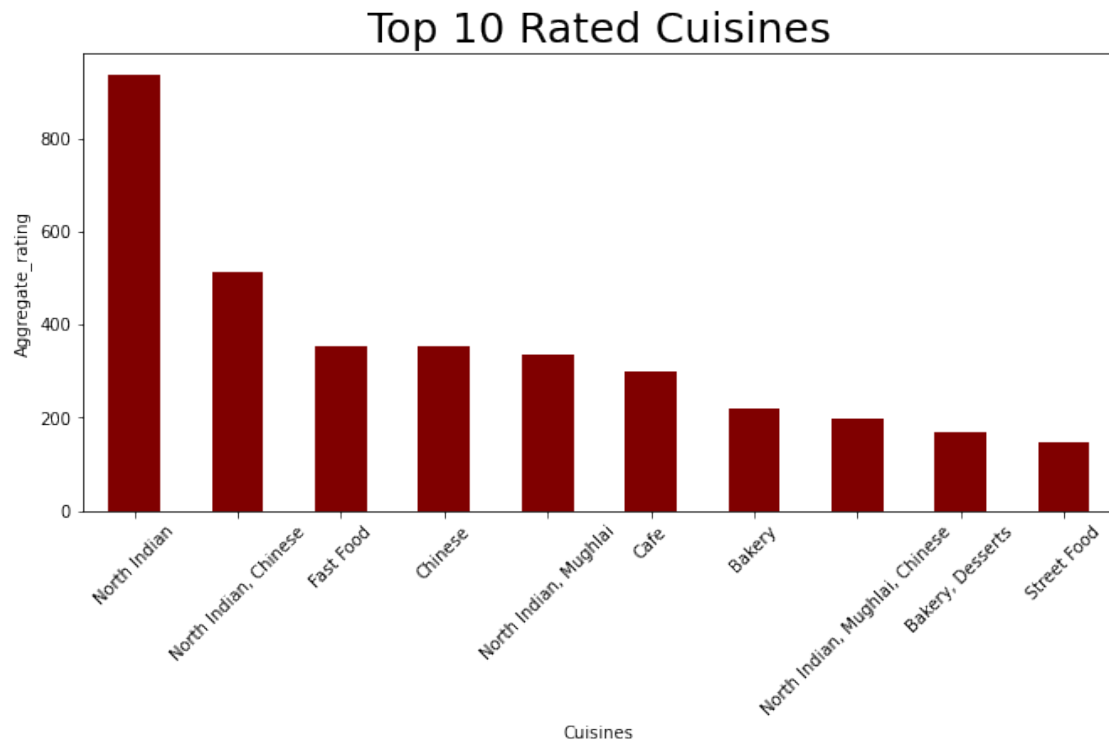

[ ]: Here we can see that the restaurants who having table booking facility has high average rating than restaurnt don't have table booking facility

```
[23]: plt.figure(figsize=(6,6))
sns.boxplot(x="Has_Online_delivery", y="Aggregate_rating", data=df)
plt.title("Impact of delivery status on Rating")
plt.show()
```

[ ]: Here we can see that the restaurants who having online delivery service has   
 ↳ high average rating than restaurnt don't have online delivery service

```
[43]: df2 = df.groupby("Cuisines")["Aggregate_rating"].count().
      ↳ sort_values(ascending=False).head(10)
plt.figure(figsize=(11, 5))
df2.plot(kind='bar', color='maroon')
plt.title("Top 10 Rated Cuisines", fontsize=25)
plt.xlabel("Cuisines")
plt.ylabel("Aggregate_rating")
plt.xticks(rotation=45)
plt.show()
```

[ ]: Here from the above bar graph we can see that customers have highly preferred  
→ North Indian Cuisines
